

Job Description

Web Developer / Front End Programmer (UI JavaScript HTML 5 CSS 3 Mobile ASP.NET Web). Leading eCommerce site is seeking bright and creative Web Developer(s) to design and develop applications for their desktop and mobile B2C and B2B websites. This highly transactional travel website receives 1 million unique visitors each week, 600 requests a second and you will be a key player in ensuring it has the capability to meet this growing demand.

This is a company that recognises the central importance of technology to their business and invests in its systems and its people. As a Web Developer you will have the freedom to choose the best tool for each job and innovate, making recommendations for technology selection and learning on the job.

Offices based in South West London, beautifully located by the river. You will be working in an informal, collegiate team environment with a casual dress code and regular beers on Friday.

Skills & Requirements

Essential

- Experience of designing and developing engaging web front ends
- Strong vanilla JavaScript skills (including es6)
- Good understanding of HTML5
- Ability to write clean modular CSS
- Excellent communication skills
- Likely to be degree educated

Beneficial

- Familiarity with Typescript
- Experience of css preprocessors such as LESS or SCSS
- Experience of modern build tools (node, npm, gulp, webpack etc)
- Experience with web frameworks such as Angular JS and React and an appreciation for the problems that they are trying to solve
- An appreciation for the principles of functional programming and experience with functional languages e.g. Elm or ClojureScript
- Familiarity with various techniques for optimising mobile experience

As a Web Developer you can expect to earn a highly competitive salary (dependant on skills and experience as multiple roles are available), plus bonus and benefits package.

About Travel Republic

There has been a long running debate at Travel Republic as to whether we're a tech company or a travel company. Travel Republic was born out of a software house. Fed up with writing software for companies that didn't understand technology and driven by a desire to write some really great software, the developers started Travel Republic. Technology has been at the core of Travel Republic ever since. We think that makes us a Tech company, but we're sure the debate will continue.

With over two million holidaymakers booking annually through our websites in the UK, Ireland, Spain, Italy and Germany, Travel Republic is one of the largest and most well-established online travel agents in Europe. We have been successfully helping people book their hotels, flights and other travel arrangements for over 10 years.

With millions of visitors and searches on our site, the code that runs it has to be excellent. We continually refactor and analyse our systems to make them faster and provide a richer experience for our customers. This on-going technical challenge is a fantastic opportunity to try out new techniques and really push the limits on what's technically possible. But it's not all about raw performance, our usability engineers know that every second of customer attention counts too. That's why we're always reinventing and tuning our site to achieve the best possible results.
